Caution:
Don’t let the product fully expose under the Sun or in rain. The cushion cover will losing the water resistant under prolonged sunshine and raining.

How to maintain:

This furniture has been made from seasoned hard wood and has already been painted prior to packaging. Wood is a natural material and its appearance will change when exposed to the elements; surface splits and checking may appear, particularly on the end grain and to a lesser extent on the surface within a few weeks if left exposed to the elements. This is normal for close-grained hard woods. The furniture is designed with this in mind to remain strong and durable. If left exposed to the weather your furniture will turn a silver grayish color, the exact color will depend on the environment; for example, dark spots may occur if the furniture is placed in a shady location under a tree. To help preserve the color cover the furniture with a garden furniture cover when not in use. Wood expands and contracts with changes in relative humidity, to prevent over drying and excessive cracking do not store in a heated place.

To maintain the original timber color and to keep your surface in pristine condition we recommend applying a water base painting. If your furniture is in a fully exposed environment, we recommend re-coating 2 times per year. In a semi-covered environment (e.g., shade, covered patio or similar) we recommend coating once per year. By applying the oil/stain before the wood begins to turn the characteristic silver/gray color following these simple instructions may lengthen the interval between re-coating.

Step:

1. Cover the floor area with a suitable liquid resistant ground sheet to contain dust, dirt or spills.
2. Use suitable protective clothing, ie. rubber gloves , apron etc.
3. Check and re-tighten all furniture hardware
4. Inspect the condition of all wood surfaces. The silver/gray color indicates the natural oxidation of the wood and may be accompanied by fine surface splits or checking. This is evidence of the wood’s natural protection acting like our outer skin. Consequently, the natural weathered surface is only skin deep and the original color reappears when new wood is exposed.
5. To return the wood to it’s original color we recommend cleaning the surface of dirt, bird droppings, tree sap, grease etc. Scrub or brush with a mild detergent and rinse thoroughly. Ensure the wood surface is completely dry before finishing.
6. **DO NOT USE STEEL WOOL** as the fine particles may result in dark rusty blotching.

Pillowor Cushion may be flat after vacuum extraction for a long time.please follow the below step:

Pillowor Cushion Fluff:

We recommend fluffing your pillow by hand for at least 30 seconds by:-Fluffing diagonally.

Hol d diagonal corners of your pillow and clap them together ,

Don ' t clap too hard, though, because you might actually make your pillow flattrr with too much force.
